Lagos, Nigeria

Eight years shipping complex digital products across fintech, travel, SaaS and AI. I turn ambiguous, technical workflows into clear, intuitive experiences, and I work directly in code (React, Vite, Tailwind, AI-assisted development) to validate and ship designs rather than stopping at static mockups. Alongside studio and client work I build and ship my own AI-powered products, partnering with product and engineering teams from early exploration through implementation.

Experience

Founder & Lead Product Designer

2025 — Present

BuildNest Studio

- Lead 0→1 design for AI-powered products, owning product vision, UX architecture, interaction design, prototyping and implementation.
- **Reclaim:** end-to-end merchant experience for an AI-powered payment recovery platform: dashboards, authentication, recovery workflows and complex payment states.
- **AI Operating Partner:** an executive intelligence platform that organises company context, surfaces risks and decisions, and turns complex information into actionable workflows.
- **BuildVoice:** product strategy, customer journey mapping, AI workflow design and dashboard experiences for an AI-powered customer operations product.
- Partner closely with engineering and use AI-assisted development (Claude Code, Cursor) to prototype directly in code and move designs toward production.

Lead Product Designer

2024 — Present

Kalabash

- Lead design across fintech and travel products, shaping mobile and web experiences from problem definition through implementation.
- Designed onboarding, authentication, KYC, wallet, payment and travel workflows with multiple states, edge cases and regulatory constraints.
- Built and maintained a reusable design system that improved consistency and supported faster engineering delivery.
- Built a component-driven Kalabash UI System in React, Vite and Tailwind CSS, strengthening the link between design system and frontend implementation.
- Partnered with product managers and engineers through iterative prototypes, structured design decisions and implementation reviews.

Senior Product & Digital Designer

2021 — 2024

Wakanow, Softcom, KPMG and ElectHER

- Designed dashboards, payment systems, customer portals, internal tools, SaaS experiences and campaign products across several business contexts.
- Translated complex business requirements into structured, intuitive digital experiences and saw them through delivery with cross-functional teams.
- Improved product usability through research, rapid prototyping, interaction design and iterative refinement.

Independent builds

- **FirstUser**: an AI browser agent built with the Solari SDK and OpenAI for a public builder challenge; forked over 270 times by other builders.
- **Build Together**: a co-founder matching platform for African builders, designed and built end to end, currently at pre-launch waitlist stage.

What I bring

Design engineering	Design-to-code, React, Vite, Tailwind CSS, AI-assisted prototyping (Claude Code, Cursor), production-ready UI
Product design	End-to-end product design, UX architecture, interaction design, prototyping, user flows, product strategy
Complex systems	Complex workflows, enterprise dashboards, multi-step journeys, design systems, information architecture
AI products	AI interaction design, conversational UX, AI workflow architecture, decision-support interfaces, 0→1 products
Collaboration	Cross-functional leadership, product and engineering partnership, design storytelling, documentation, mentorship

Education

B.A. Graphic Design, Delta State University, 2015 | Frontend Development, TS Academy, 2026 | Product Design, Dev and Design, 2024

Tools

React, Vite, Tailwind CSS, Figma, Claude Code, Cursor, ChatGPT, GitHub, Notion
